SUMMARY

Third-year B.Sc. IT student targeting Java Spring Boot backend roles, with React and the MERN stack as a secondary stack. Builds secure REST APIs, JWT authentication and custom security layers, and ships containerized, deployed applications.

EDUCATION

Shri Purshottamdas Laldas Shroff College of Arts and Commerce

Maharashtra, India

Bachelor of Science in Information Technology (B.Sc. IT)

Expected 2027

EXPERIENCE

Python Developer Intern

Mar. 2026 – Apr. 2026

BizTech IT Solutions

- Built a Library Management System in Python and Tkinter to manage book records and user interactions
- Implemented the UI components, event handling and application logic; tested, debugged and improved the application

PROJECTS

SecureStorage | Java, Spring Boot, Spring Security, MySQL, React, Docker, Backblaze B2

- Built a custom Spring Security filter performing JWT validation, IP/user-based blocking and access-attempt logging on every protected endpoint
- Stored user files in Backblaze B2 object storage, with magic-byte content verification, per-type size limits and a 10GB per-user quota
- Designed expiring, download-capped share links for public access without exposing the rest of a user's storage; containerized the backend with a Dockerfile

[GitHub](#) | [Live demo](#)

ClickNotify | Java, Spring Boot, Spring Mail, Telegram Bot API, React, Docker

- Built a notification service sending Email and Telegram alerts independently, so a failure in one channel does not block the other
- Implemented one-tap Telegram account linking with deep links and update polling; secured the API with a pre-shared key and per-IP rate limiting
- Containerized the Spring Boot backend with a Dockerfile and deployed it on Render, with the React frontend on Vercel

[GitHub](#) | [Live demo](#)

AI Search Assistant | React, Node.js, Express, MongoDB, JWT

- Built a MERN chatbot with JWT authentication, bcrypt hashing and per-user data isolation; implemented full chat-session CRUD
- Implemented a retrieval-augmented generation pipeline combining live Wikipedia search with an LLM to produce cited answers

[GitHub](#) | [Live demo](#)

AI Detector | React, Node.js, Express, MongoDB, JWT

- Built a document AI-detection tool blending an LLM judgment with a stylometric heuristic, with fallback to heuristic-only scoring
- Parsed PDF/DOCX in the browser so raw files are never uploaded; added user accounts and persistent analysis history

TECHNICAL SKILLS

Languages: Java, JavaScript, HTML5, CSS3

Frameworks: Spring Boot, Spring Security, React, Node.js, Express.js, Hibernate, Spring Data JPA

Databases: MySQL, MongoDB

Cloud & DevOps: Docker, Backblaze B2, Render, Vercel, Git, GitHub, Maven, Postman

Certifications: React (Frontend Developer), REST API, JavaScript, Node.js (Intermediate)

Job Simulations: Forage (Sept 2026): Software Engineering – Full Stack (.NET/React); Working as a Software Engineer at a Startup; GitHub Collaboration & Code Verification

AI Tools: Claude, ChatGPT, Gemini, Codex — for code review and debugging
